

Plato® -Wick XL

**PLATO®-WICK XL PREMIUM
DESOLDERING BRAID CUTS DESOLDERING
TIME UP TO 50% COMPARED TO
CONVENTIONAL WICK.**

Plato®-Wick XL is designed for quick and safe desoldering printed circuit board components, terminals, lugs, and wire wrap pins, and removing bridges, icicles and unwanted solder.

- ✧ Quick, clean pick-up because the fine gauge copper braid transfers heat to the connection faster, greatly reducing desoldering time.
- ✧ Leaves minimal residue therefore minimizing the need for post cleaning.
- ✧ The design of Plato-Wick XL absorbs a greater volume of solder than conventional wick and it works at a lower temperature because of its reduced mass.
- ✧ The combination of fast action and lower temperature results in greater operator comfort and reduced risk of heat damage to components.
- ✧ Pure white rosin flux meets MIL-F-14256D, Type R.
- ✧ Color-coded containers.
- ✧ Sizes for all applications.
- ✧ **Compare the quality and price. Call for a quotation.**
